Hi: I want to keep selected as many comments as I would in the 'text format' option of the posts option in the tools > conversation. Are there other options to do so? I do know that I can make it easy by doing a text search (:mail:) but I was thinking of something with additional search techniques. Comment I have added the functionality you describe in the latest version of SMO. We plan to turn this on in the next version, which will be released very soon. Sorry for the delay on the release of SMO. Thanks for the info. So, is there any plan to turn on this functionality? It is pretty useful feature for myself, too. Comment I would like to be able to have a more readable, or a single thread link to the more than 5 threads I'm following. Isn't it just a matter of creating a link to each thread in the menu? Tho I'm not sure, a link (in this context) means a link in this forum and not a link to the actual page (as in e.g. in www.google.com). I was also confused how you can have conversations without posting, in the sense that you are not the first to post in this conversation. The Healing Brush uses the pixels from one or more selected areas on an image and blends them with pixels in an area of the original image that is considered to be "similar". This is useful for correcting an image where something is out of place. The Dodge and Burn tools allow you to create a gradual change in brightness or color. The Dodge tool adds highlights and shadows, while the Burn tool adds details and shadows. The Smudge tool allows you to gradually change the content of an image. This is a great way to create transparency effects in image layers. The Pen tools allow you to draw or trace over images to create complex shapes. The tools available are not like those on a typical graphics tablet. You can draw on multiple layers, and adjust the size of the tools to create your desired effects. The Gradient tool allows you to create a smooth transition between different colors. The gradient can be created with up to 16 colors and is very useful for creating complex designs. The Color Picker allows you to pick a color from an image, or an existing selection. The Smart Brush tool allows you to apply a selected set of brushes to the entire image. The effect of the brushes on the image is based on the colors of the brushes used. The Eraser tool allows you to erase pixels by selecting the tool and moving it over the selected area. 2.2.3 With so many layers around you tend to get confused when selecting specific layers. Also, it is very easy to accidentally erase the whole image. So, here is a tip that will help you easily access certain layers. Before you start using the layers, place them on the stack. Select the layer you want to edit, and press Ctrl + T to open the Tool Options dialog. Select the Edit Layers button and then click on the Lock button. This will lock all the other layers (except the selected layer) on the stack, so you can edit them all at once. 2.2.4 Here is another tip that will help you keep track of what you have done. Save all your work with a filename that describes the original layer you started with. This is especially useful if you want to update a photo that you have already edited from one session to another. First make the changes you want to make. Then right-click and select Layer > Create Layer from Background. This will rename the layer and give it a new layer number. For instance, suppose
