Best hotel prices and deals are available now. Pulse wave velocity and arterial stiffness in diabetic and nondiabetic patients with heart failure. Systolic heart failure (HF) is a major cause of mortality and morbidity. The central role of arterial stiffness in the pathophysiology of systolic HF is still not fully understood. Pulse wave velocity (PWV) is the most direct measure of arterial stiffness and is recommended by the recent European Society of Cardiology guidelines as a method to detect increased arterial stiffness. The aim of this study was to assess whether increased arterial stiffness was detectable in patients with systolic HF and evaluated the prognostic value of PWV. PWV was assessed in 74 patients with systolic HF and in 14 age-matched control subjects. The patients were divided into those with and those without known diabetes mellitus (DM), who were further divided into patients with and those without chronic kidney disease (CKD).
