Keyword Magic is a free utility that can be used to automate processes in Microsoft Windows. Specifically, this software gives you the possibility to run automated tasks (or macros) that perform different functions (such as opening and saving files, clicking on buttons, and much more). For example, the software offers an option for organizing your files in a particular folder based on their content. Afterward, you need to choose the location on your hard drive where you wish to create the macros and press Next. After the program has successfully been installed, you can begin creating your first macro. You have the choice of creating a shortcut or an association, though for most users a shortcut will be sufficient. To create a shortcut, press the Shortcut button and specify the location on your system where the shortcut should be placed. You may now edit the macro to the specific needs of your system. To do this, press the Edit button and in the text field that will appear on your screen, enter the commands you wish to execute when the macro is executed. Press OK to close the dialog box.
